

# M7L APP & WEBSITE

UI/UX layout  
with full fledged features

## Shops & Product Page

### STEP 01

Name your store

The nights you've lost, the fights you've fought... to find the perfect name.

Now is the time to make it happen.

Name your store, choose a category and say a prayer.

### STEP 02

Add your products

Bakery or boutique, art or apparel...now it's time to sell.

Let the world know what you have to offer. Add your products, set the price and wish you good luck!

### STEP 03

Start selling

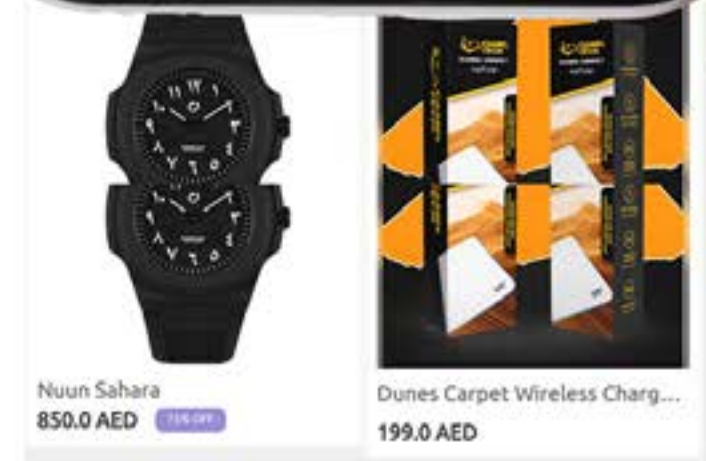

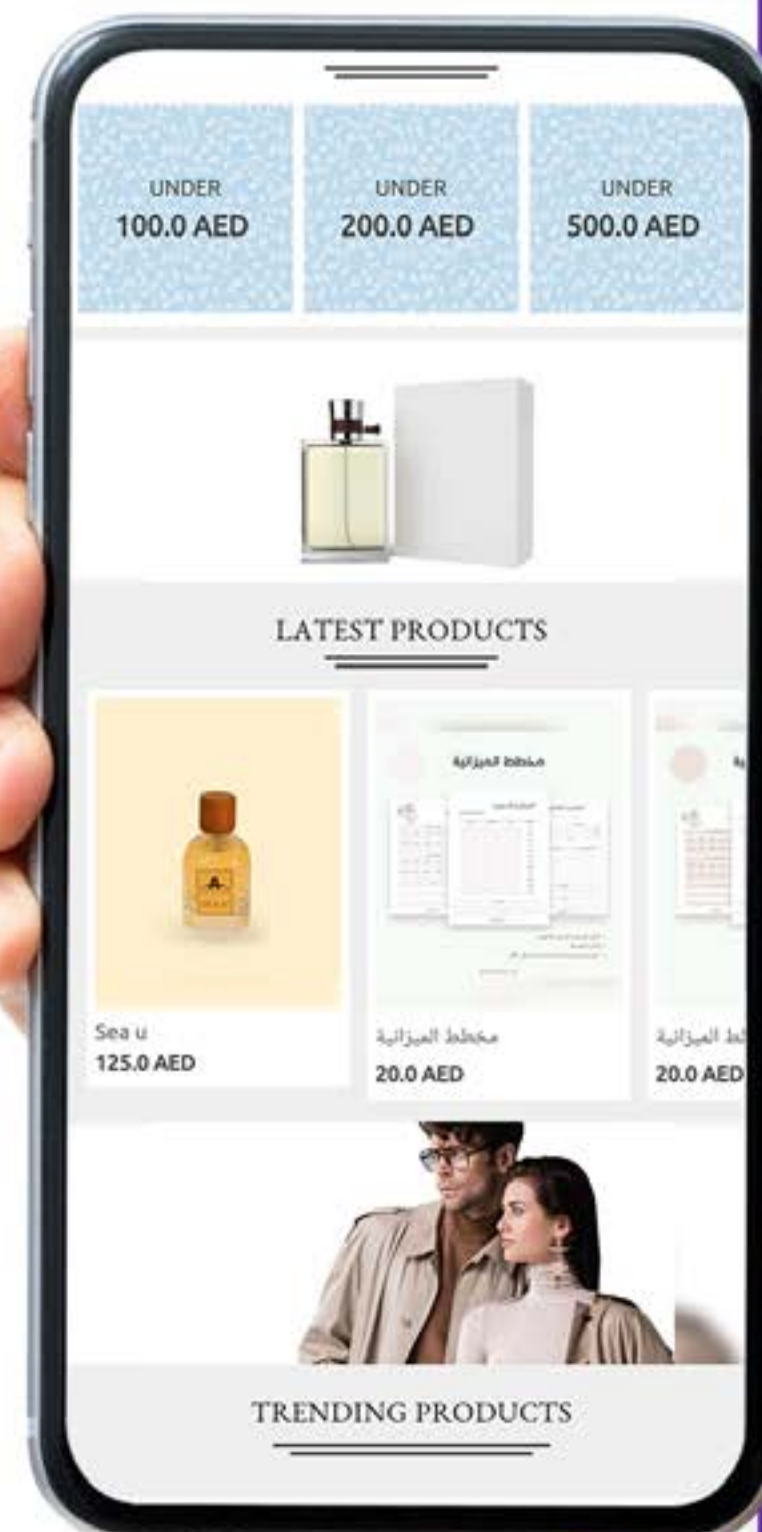

The moment of truth. The leap of faith.

This is where it all begins.

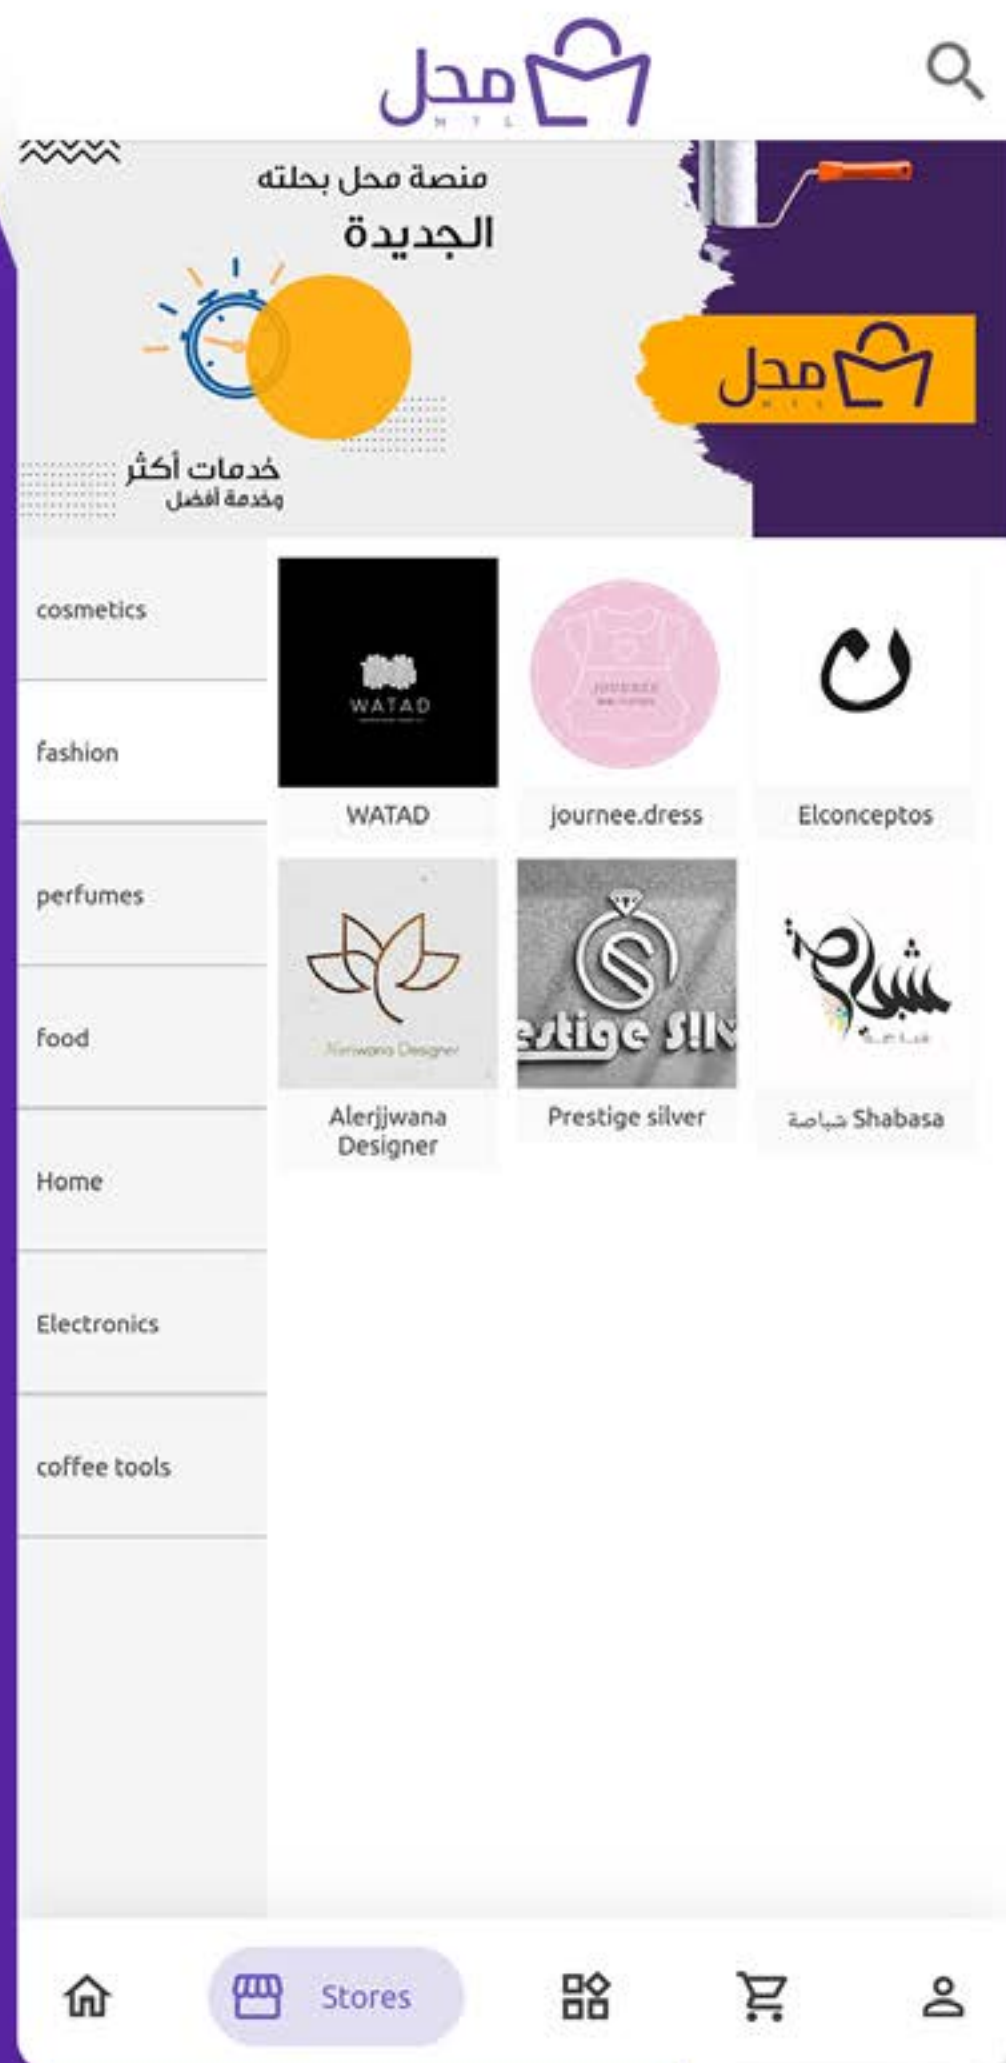

Your store is ready for the world.

Start sharing and taking orders.

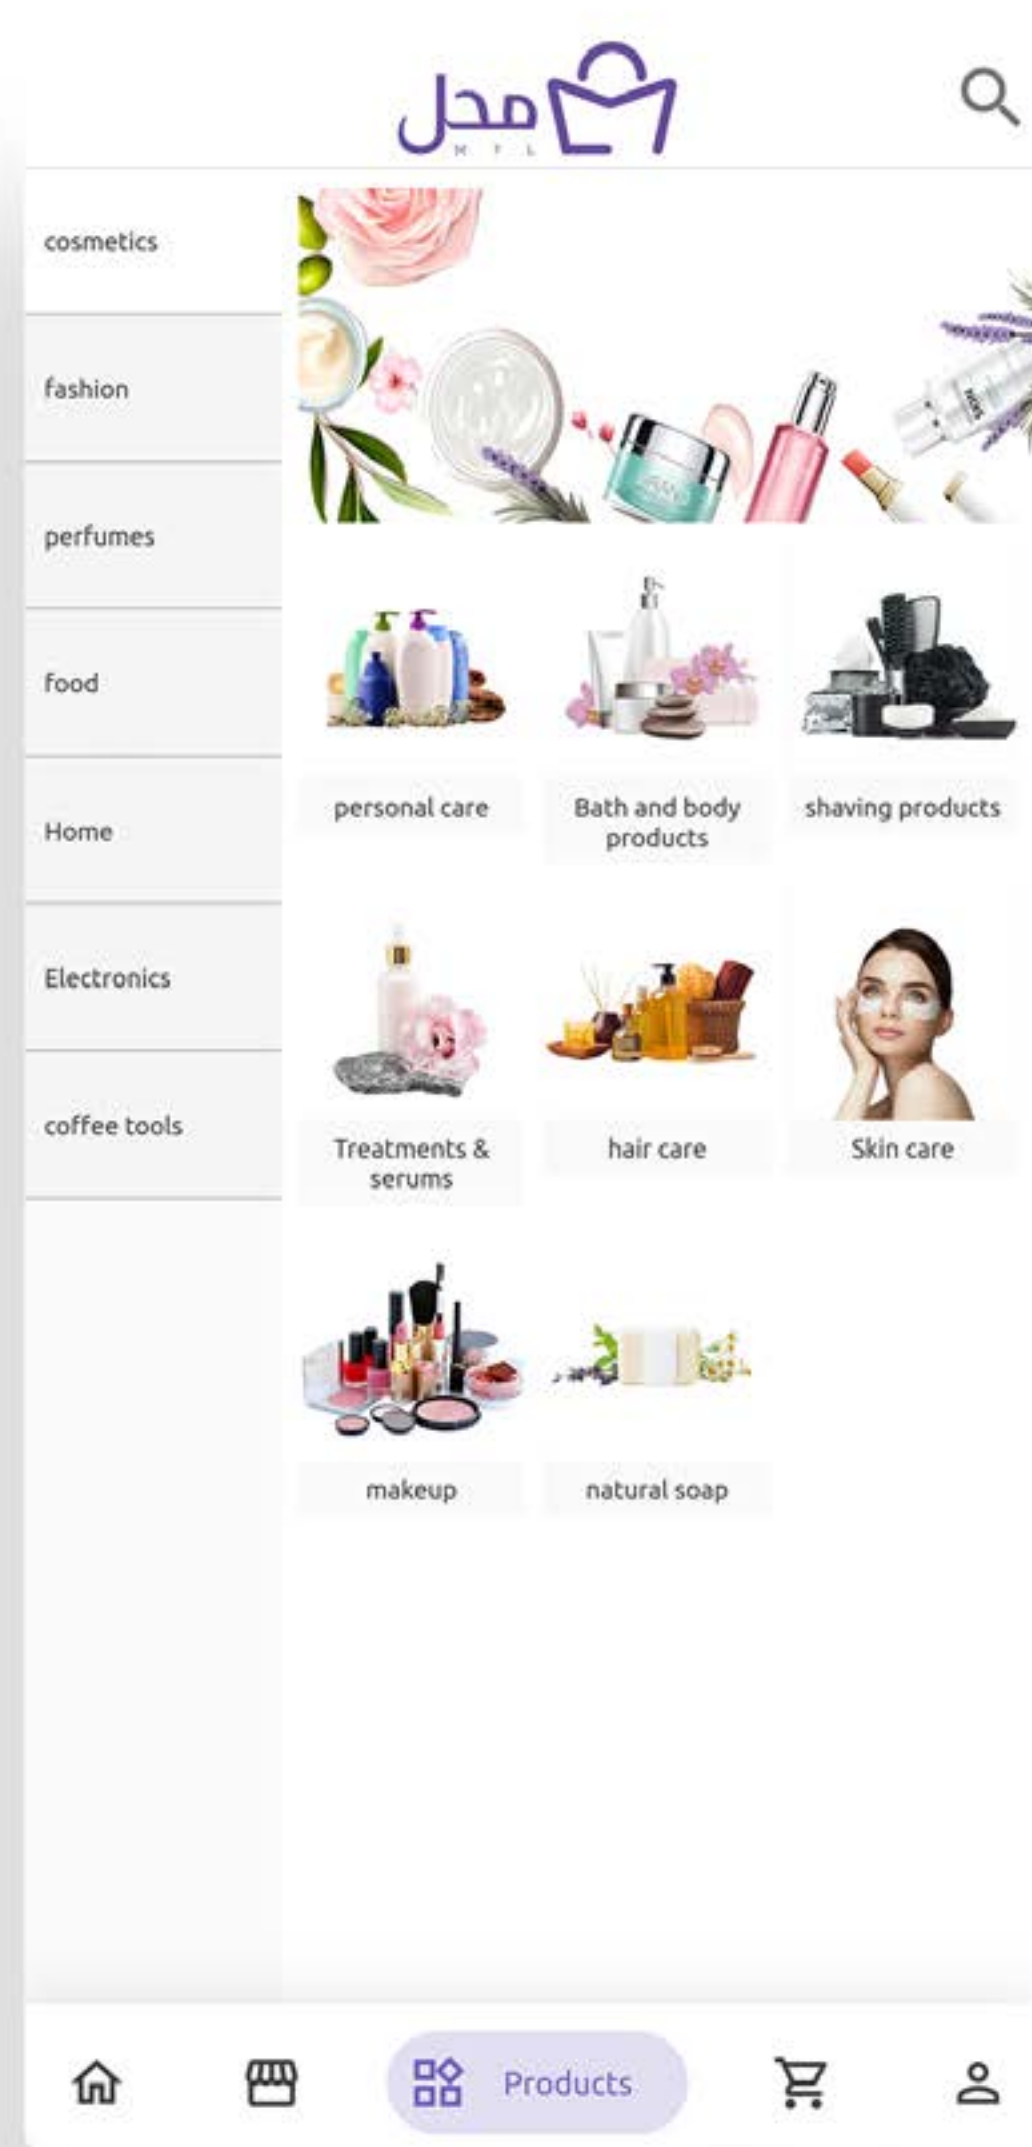

Kaching!

# Account Screen

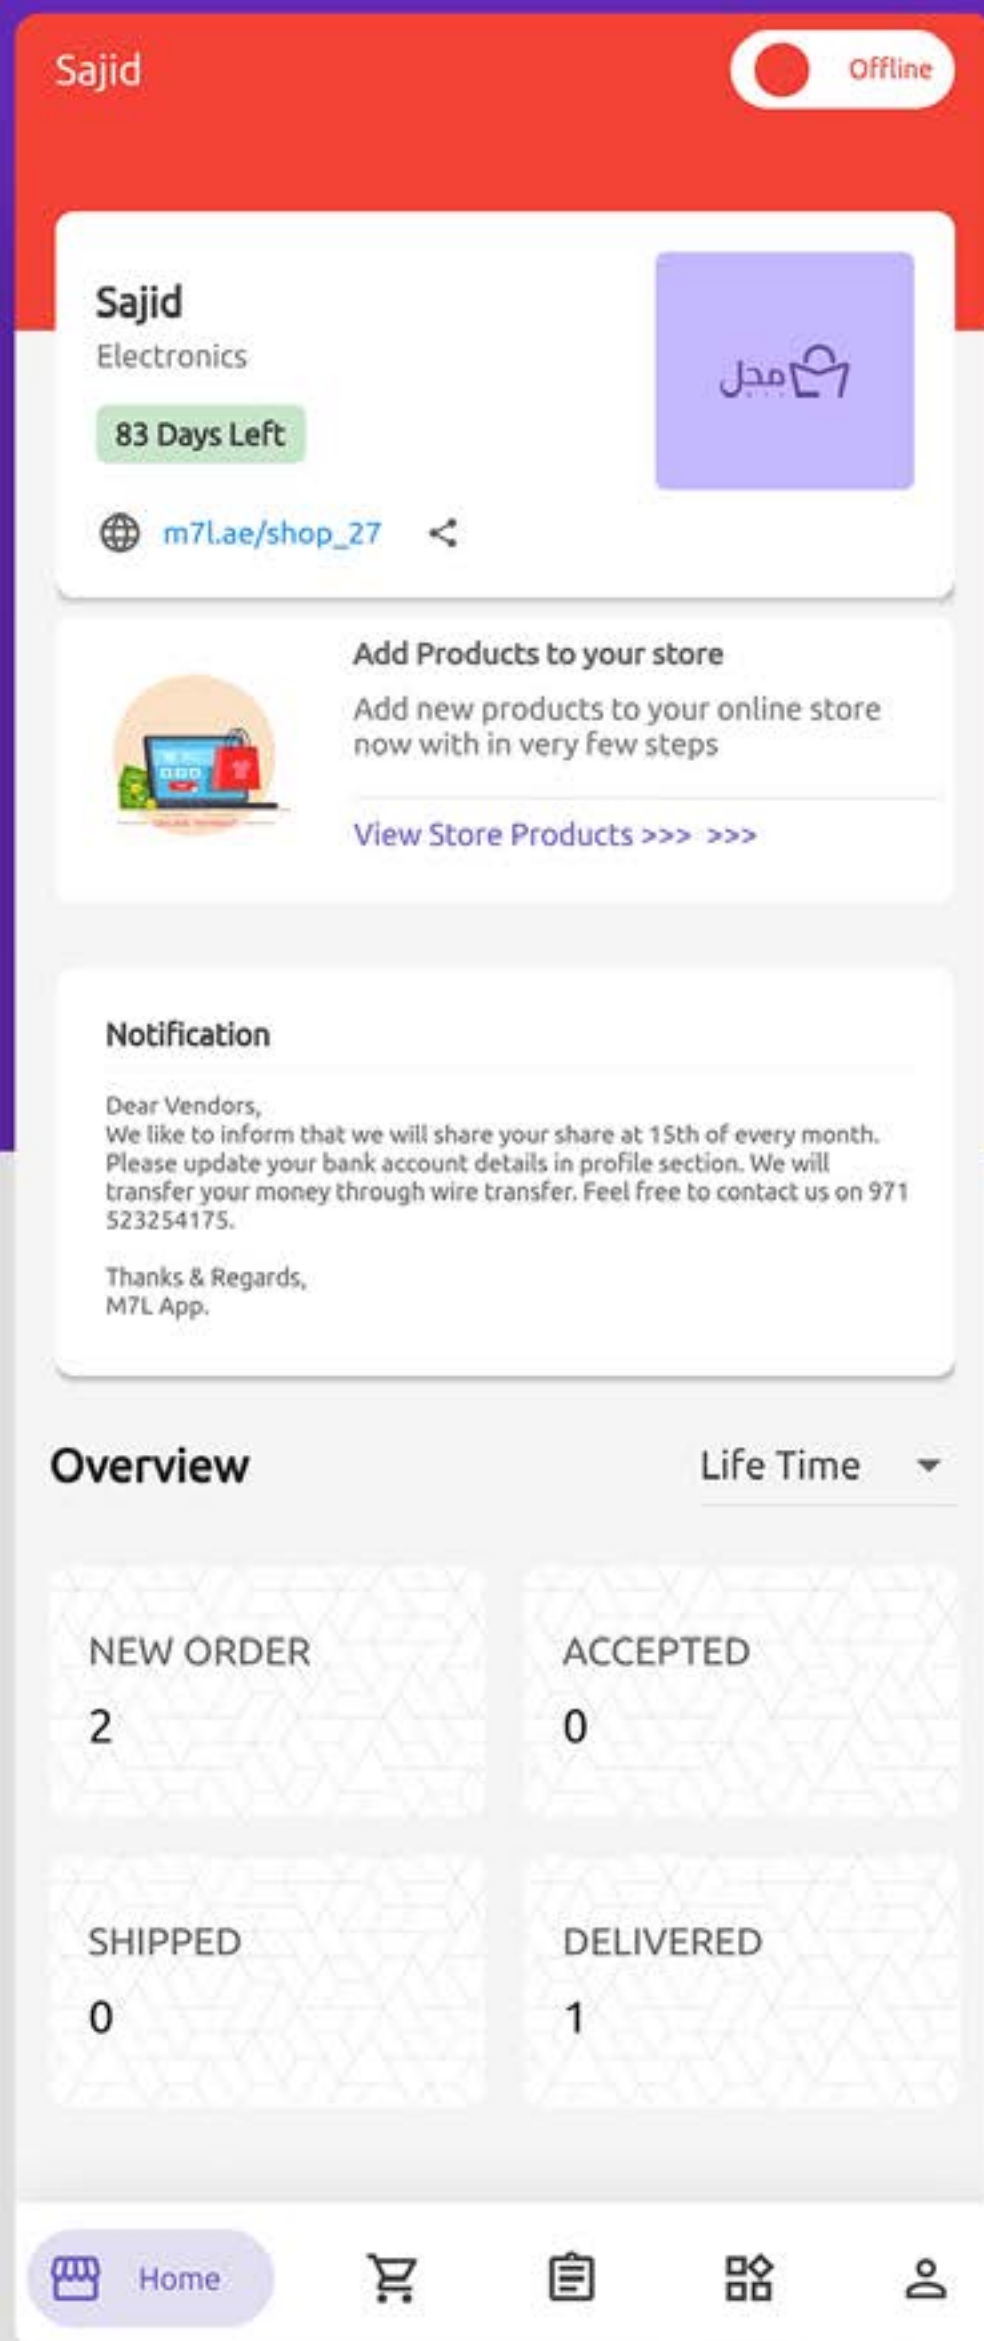

M7L comes with an online web finder, where a user can search for a shop by category & location.

A user can also finish a purchase and place an order subsequently.

The product can be viewed in the respective shop and each and every shop generates a separate URL.

Users can later track their orders that has been placed already for future references.

## Vendor Panel

M7L comes up with a vendor panel app interface on the app, where one can upload a product. Manage their orders, create coupon codes for discounts. Vendors can also make use of additional features such as share business cards, create product stories, create a customer history and much more.

This panel is connected to firebase for push notification and WhatsApp notification for a seem-less communication between the vendor and the customer. Rules or settings for the vendor can be changed or edited from the admin dashboard of M7L.

**A multi vendor  
Ecommerce  
website which  
is connected to  
the app.  
The landing  
page shows  
their various  
services &  
pricing part.**

This website is linked to a finder which is connected to the app. This is completely built on flutter by Google.

This finder has vendors in different cities. Each vendors has a catalogue & one can purchase the products on the website through payment gateway or other payment procedures like cash on delivery.
